

1 Remove the rubber cap from the dropper.

2 Make a hole in the base of a small bottle.

3 Make another hole in its lid.

4 Tightly fit the dropper tube in the bottle cap.

5 Shut the base hole with your finger and invert the bottle in a jar of water.

When the bottle is dipped in water the pressure near its lid is high. So, on opening the base hole water gushes in like a fountain.

6 Open the base hole to see a fountain gushing inside the bottle.
