

- 1 Cut eight 20-cm x 2-cm strips of transparency.
- 2 Cut eight equally spaced flaps on the rim of each candle holder.

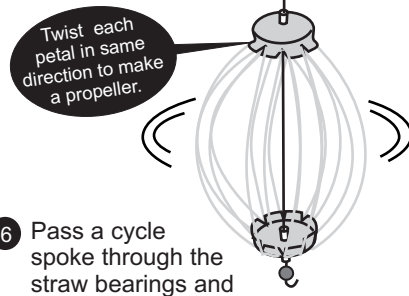

- 3 Make a hole in their base and fix a stiff straw piece in them.

- 4 Stick transparency strips to the flaps on one holder.

- 5 Stick the other end of the strips to the other holder.

- 6 Pass a cycle spoke through the straw bearings and hold it under a ceiling fan. The spinning model will look like a giant Soap Bubble in motion.

As air strikes the transparency blades it rotates the bubble.
